

DEVELOPER / COPENHAGEN

Useful things, made personal.

I'm David, a developer in Copenhagen. I build creative workspaces, tools that keep AI work moving, and small apps for everyday jobs.

This is a selection of the work: what it does, the decisions behind it, and a few things you can try for yourself.

IN THIS COMPANION

02 PanelForge
Images, references and a retained original.

03 Connected agents
A native answer returns to its task.

04 Memory + workbench
Keep context and local choices inspectable.

05 Small tools
A print, a margin note and an editable deck.

06 The work after it works
Three concrete changes, then keep exploring.

danishdave.com

01 / CREATIVE WORKSPACE

Give creative work a home.

PanelForge brings images, conversations and coding-session history into one web workspace. A result can keep its references and still be found when the first task is over.

ORIGINAL

REVISION

Actual generated images. The second used only the new original as its reference. Separate conversations are connected by image lineage.

Editing lives in chat: attach a gallery reference and describe a change. The request changes the lid and handle from red to mustard. The downloaded original stays unchanged. The composition remains recognisable; this is a generative edit, not pixel-perfect preservation.

Based on Original

[View Original \(#35769\) →](#)

A focused crop of the actual gallery detail after completion. The revision links back to its original.

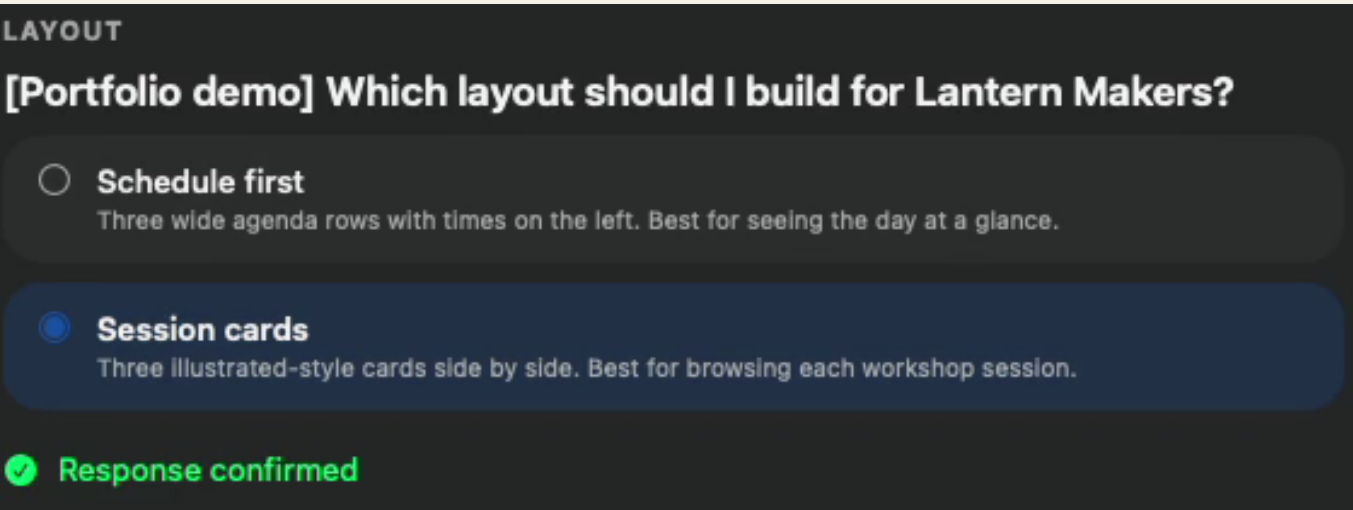

Code History gives coding sessions their own list, day view and weekly digest. A session preview makes it possible to skim before opening the full transcript.

02 / CONNECTED AGENTS

A question can leave the terminal.

Attention lets an agent ask through a native Mac card and wait for an answer. In this fictional Lantern Makers task, the same Codex task receives Session cards and builds that layout.

Actual native choice and confirmation from the live build 121 recording. Automated Intel Computer Helper selected and sent the answer.

Chosen layout: Session cards

10:00 Fold the first form Learn three paper folds and turn them into a small lantern.	11:15 Shape the light Try colour, cut-outs and soft shadows with an LED tea light.	13:00 Make it your own Build a final lantern, then share your work around the table.
--	---	---

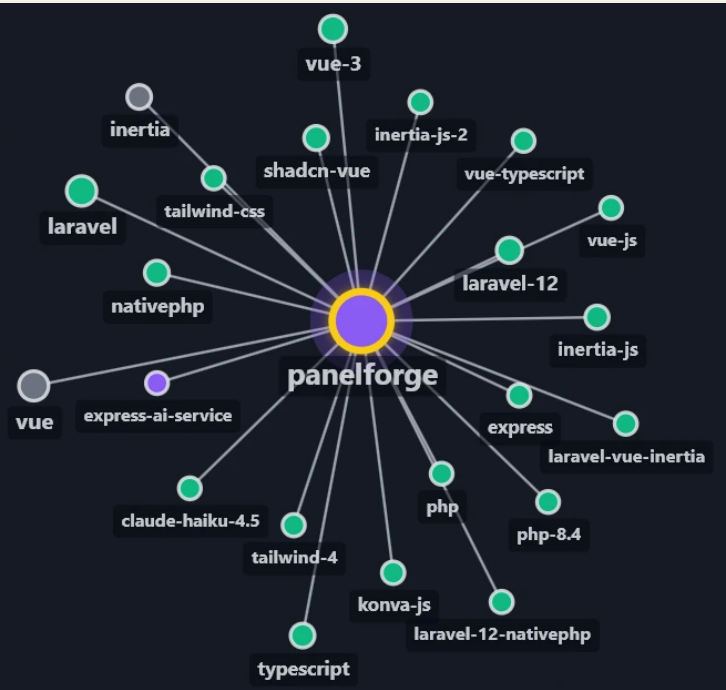

Actual generated page: three sessions in the selected layout. Fictional workshop content.

A separate recovery experiment closes a browser connection while the same local engine process finishes. Its stored answer is retrieved later; process-restart recovery was not tested.

[Watch the actual run](#)

[Inspect recovery](#)

Keep context inspectable.

Follow the source

PanelForge connects extracted entities and relationships to their source conversations. FindThat retrieves one supporting detail; Same-Page brings earlier analysis into a new task.

Actual filtered graph. Historical aliases and technology names are extracted records, not a current architecture inventory.

Mira's studio notes

Product

mira

 uses →

slate tablet

Object normalized · source link retained

Read source: Mira chooses a tablet

+

Recorded endpoint replay, fictional data. An exact typed correction retained source links; its inverse was applied immediately. This exhibit is not shipped curator UI, and it does not demonstrate automatic semantic matching.

Portable setup, local choices

metacode and metacodex version shared instructions, hooks and skills while credentials and sessions stay local. Deliberate drift adoption preserves a machine's legitimate settings.

04 / SMALL TOOLS

Small tools, complete jobs.

Kitforge / Studio

Set words in a moving background, choose a frame and download it. Studio borrows Kitforge's real renderer; preview and export use the same composition.

Actual browser-exported PNG. Fictional Sunday Studio text.

[Make a print](#)

Pencil Page

Handwriting gains anchored margin notes. A follow-up can explain a correction without losing its place on the page.

Synthetic demonstration ink; actual Opus 5.5 feedback in an iPad Simulator. Focused capture of the correction.

[Inspect the margin notes](#)

Conference Notes

Carry notes into themes with source links, then take an editable presentation into the next discussion.

[Explore Conference Notes](#)

In their words

"Agree a 90-day experiment with a measurable outcome."

"Pair teams from different markets for one pilot and document the reusable parts."

"We need a lightweight governance checklist before client pilots."

Fictional notes; actual analysis and editable 25-slide output. Slide detail.

05 / THE WORK AFTER IT WORKS

Keep working after it works.

The releases tell a story of specific decisions: finding a result, keeping one composition consistent, or making a transcript easier to open.

MAJOR

web-v3.0.0 / Nov 2025

One gallery to navigate

PanelForge brought browsing and the gallery together, with a project tree and bulk assignment.

MINOR

v0.5.0 / Sep 2026

Motion in the same composition

Kitforge added animated backgrounds. Preview and exports use the same drawing function.

PATCH

web-v10.20.95 / Oct 2026

A preview before opening

Code History gained a session peek, so a weekly digest could lead to a preview before the full transcript.

Release tags record code checkpoints, not adoption or product-launch counts.

These projects started with specific problems. Some stayed small; PanelForge became the workspace that connects much of the rest. I use AI coding agents and make the product decisions myself.

Forge World: a designed portfolio illustration, not an operational system map.
